Slow Internet speed/weak signal on the nodes

The Problem: Customer Adam Barmas (Australia) is experiencing poor Wi-Fi coverage and weak signal on the child nodes of his Linksys MX6200 3-node mesh system, and is now demanding a replacement or refund after refusing further troubleshooting steps.

The Action:

- Initial L1 support (Maylene) resolved the original app login issue by resetting nodes; ticket was prematurely closed.
- Customer submitted a DSAT survey (CSAT: 1, Resolution Rate: No), triggering a CAT escalation.
- Ticket escalated by Marc Baynos and assigned to the CAT/Technical Escalations team.
- Leonisabless Esling (Bless) noted the customer was in Australia, sent an email promising a callback between 9 AM–8 PM Australia Time, and endorsed to the morning shift.
- Customer replied stating he never received the call and threatened a refund if not contacted the next day.
- Support emailed an apology and confirmed a callback to +61 450 695 840.

- Eric Marbella called twice on May 14 (9:33 AM and 9:53 AM Australia Time); customer was unavailable both times and voicemail was full on the second attempt.
- Eric sent a follow-up email requesting preferred callback time; customer asked to be called the next day (May 15), confirming he was free all day.
- Eric replied confirming a callback on May 15, but then realized the Australia line was closed on weekends; emailed the customer explaining this and promised contact starting Monday.
- Ticket endorsed to John Pagurayan for Monday callback.
- John Pagurayan (posing as supervisor) called on May 18 and spoke with the customer; confirmed weak RSSI causing poor speeds (50 Mbps on farthest node vs. 500 Mbps near parent), performed reboot, factory reset, full reinstallation, and re-added child nodes; sysinfo captured showing weak backhaul RSSI (-63/-74 and -70/-77); customer grew frustrated, refused further troubleshooting, and requested a manager callback.
- John escalated summary to Marc Baynos and set ticket to "Pending - HQ Feedback."
- Paulo Real took over the case on May 18–19; made two callback attempts — first reached voicemail, second successfully spoke with customer.
- On second call, sysinfo showed even weaker RSSI (-80/-82); customer again refused further steps, demanded replacement or refund, and threatened to contact consumer protection authorities; agent informed customer that RMA/refund cannot be guaranteed without completing troubleshooting.
- Paulo called customer a third time (9:03 AM MNLA) to inform him an email was sent requesting proof of purchase and a photo of the parent node label.
- Paulo confirmed only the parent/mother node label was needed; customer replied and submitted photos of receipt and serial number/model label.
- Paulo escalated to Zither Calvin (Linksys HQ) with full case summary, RSSI data, and pricing computation (Model MX6203, AUD 849.60), requesting guidance on how to proceed.

Next Steps:

- Await guidance/decision from Zither Calvin (Linksys HQ) on whether to approve or deny the RMA or refund request.
- Communicate the outcome to the customer once a decision is made.
- If RMA/refund is approved, process accordingly and notify the customer.
- If denied, advise the customer on available options and document the outcome.
- Ensure the ticket is reassigned and not left unmonitored given the customer's stated intent to escalate to consumer protection authorities.

Timeline:

-  2026-01-12 — Customer — Reported inability to log in to the Linksys app for MX6200 (S/N: 58W10M25E00377).
-  2026-01-12 — Maylene Delada (Agent) — Performed troubleshooting: force-closed app, reset nodes; all nodes came back online and ticket was marked Resolved.
-  2026-01-14 — Customer — Submitted DSAT survey (CSAT: 1, Resolution: No, FCR: 2 contacts, Feedback: "It's terrible").
-  2026-05-13 — Marc Baynos (Agent) — Escalated ticket from Resolved to Escalated status and flagged as a DSAT case for CAT follow-up; removed previous assignee.
-  2026-05-13 — Marc Baynos (Agent) — Noted ticket for CAT escalation and tagged team leads (Zither Calvin, Joey Agao, Vincent Tobias, Jane Hebia, Kirby Dona).
-  2026-05-13/14 — Leonisabless Esling / Bless (Agent) — Claimed ticket, noted customer is in Australia, sent email promising callback between 9 AM–8 PM Australia Time, endorsed to morning shift techs.
-  2026-05-14 — Customer (Adam Barnes) — Replied stating he never received the call and threatened a refund if not called the next day.
-  2026-05-14 — Agent (Leonisabless/team) — Sent apology email and confirmed a callback to +61 450 695 840, requesting preferred time.
-  2026-05-14 — Eric Marbella (Agent) — Claimed case; made first callback attempt at 9:33 AM Australia Time — reached line but customer unavailable, left voicemail.
-  2026-05-14 — Eric Marbella (Agent) — Made second callback attempt at 9:53 AM Australia Time — reached line again but voicemail was full.
-  2026-05-14 — Eric Marbella (Agent) — Sent email to customer apologizing for missed contact, requesting preferred callback time.
-  2026-05-15 — Customer (Adam Barnes) — Replied asking to be called back the following day, stating he was free all day.
-  2026-05-15 — Eric Marbella (Agent) — Replied confirming a callback would be made that day (May 15, 9 AM–8 PM Australia Time).
-  2026-05-15 — Eric Marbella (Agent) — Realized Australia line is closed on weekends; consulted supervisor Kirby; sent email to customer apologizing and advising contact would resume Monday.
-  2026-05-16 — Eric Marbella (Agent) — Endorsed ticket to John Pagurayan for Monday (May 18) callback during Australia business hours.
-  2026-05-18 — John Pagurayan (Agent) — Assigned ticket and processed callback at ~9:50 AM PDT; spoke with customer, identified poor Wi-Fi coverage and weak RSSI on child nodes; performed reboot, factory reset, reinstalled parent node, re-added child nodes, and relocated nodes; captured sysinfo showing weak backhaul RSSI (-63/-74 and -70/-77); customer refused further troubleshooting and requested a manager callback.

-  2026-05-18 — John Pagurayan (Agent) — Escalated summary to Marc Baynos (with RSSI data and full case summary) and set status to "Pending - HQ Feedback."
-  2026-05-18 — Paulo Real (Agent) — Took over case; first callback attempt at ~7:59 AM MNLA reached voicemail; left message.
-  2026-05-18/19 — Paulo Real (Agent) — Second callback at ~8:14 AM MNLA; spoke with customer; captured new sysinfo showing RSSI -80/-82 on CN1; customer refused further troubleshooting, demanded replacement/refund, threatened consumer protection escalation; agent informed customer RMA/refund is not guaranteed without completing troubleshooting.
-  2026-05-19 — Paulo Real (Agent) — Third callback at ~9:03 AM MNLA; spoke with customer; instructed him to reply to email with proof of purchase and node label photo.
-  2026-05-19 — Paulo Real (Agent) — Sent email to customer requesting proof of purchase and photo of parent node label (serial number).
-  2026-05-19 — Customer (Adam Barnes) — Asked whether the serial number needed was from the parent or child node.
-  2026-05-19 — Paulo Real (Agent) — Confirmed only the parent/mother node serial number is needed.
-  2026-05-19 — Customer (Adam Barnes) — Submitted photos of receipt and parent node label (serial number and model).
-  2026-05-19 — Paulo Real (Agent) — Sent internal note to Zither Calvin (Linksys HQ) with full case summary, RSSI data, pricing info (MX6203, AUD 849.60), and customer-submitted documents, requesting advice on how to proceed.
-  2026-05-19-20 — Paulo Real (Agent) — Status set to Callback; awaiting HQ response.
